EON Instrumentation Now Offers Integrated High Speed Digital Video Systems

Quarter 3 | September

Eon Instrumentation now offers the integration of all digital video products including HD-SDI cameras, high speed digital video matrix switchers, HD recorders, and HD monitors. These products are versatile and can replace an entire suite full of analog video systems that need upgrade to high-speed digital. Working with speeds up to 3GHz, Eon's new VMS-712 HD-SDI video matrix switcher can replace Eon's analog video matrix switcher, the VSA-103, while keeping the same size and mounting dimensions allowing for a seamless transition into the digital world. The cameras, monitors, and recorder can also be configured for analog signals.

EON Instrumentation is also excited to announce that our biggest contract with the United States NAVY Surface Warfare Center is entering the prime of the production phase after all Low Rate Initial Production (LRIP) units have been delivered. This blanking combiner unit (BCU) is set to be installed aboard Naval surface ships beginning early 2015 to control the new Aegis weapon system upgrade.
